Benefit Informatics Online Solutions is added to MEDInnovation[®] to Help Employer Health Plans Control Costs and Manage Risk *Analysis and reporting solutions for Payers, Employers and Health Plan Consultants*

TULSA, Okla. – Cost containment and risk management are much more than buzz words for employer-sponsored health plans. Today, more than ever, employers are seeking proven solutions to control rising employee health plan costs. The first step in this process is to identify the cost drivers through claim data analysis.

Benefit Informatics is now a component of the MEDInnovation program that, along with TC3 Health and Medical Excess LLC, provides a comprehensive data analysis, risk management and decision-support solution to Payers, Employers and Health Plan Consultants. MEDInnovation empowers employers and their benefit administrators with access to a single source suite of capabilities, risk management tools and advanced loss control technology that provide proven claim cost savings.

The addition of Benefit Informatics' Data Analysis and Reporting services to the MEDInnovation suite of tools provides unique access to claim data, including analysis of procedures, providers, diagnosis as well as robust reporting capabilities that allow employers to view comprehensive information about their health plan and make plan design changes to bring about cost control.

Incorporating Benefit Informatics and its proven data analysis and reporting tools into the MEDInnovation program can provide a real benefit for MEDInnovation customers. Its robust, yet easy to use, claim analysis services puts valuable information at the fingertips of those who need timely information in controlling rising healthcare costs.

As a component of the MEDInnovation suite of services, Benefit Informatics provides users timely, often daily, access to information that previously was often unavailable at intervals less than monthly or quarterly. All stakeholders, from employee to employer to payer to health plan consultant can use this robust information to help them make timely informed decisions and implement cost control programs that can realize savings at every level.

“The MEDInnovation program is strategic and forward thinking. We are very pleased that Benefit Informatics has been selected as integrated component of that strategy” said Philip Kurtz, President and CEO of Benefit Informatics. “Our solutions play a vital role in answering the question – how can you control what you can't identify. Self-funded employers and benefit administrators are using our online technology to implement true risk management strategies.”
